

Our roto-molded boats are the World's largest linear hdp skin-foam-skin parts. Our process is very dynamic, and is challenging to say the least. We are very lucky to be manufacturing our boat hulls with Innovative Rotational Molding. They are truly not afraid to innovate. They really work a problem inside out to make the best parts possible. Dan, Eric, and their team are very hands on in a good way. Their experience, and confidence are a blessing in a manufacturing relationship. We owe our growth to their desire to exceed, and their attention to detail.
